LUKOIL GENESIS MOTOR OILS AVAILABLE AT ALL LUKOIL MAKEDONIJA FILLING STATIONS

The LUKOIL GENESIS motor oils contain less sulfur, phosphorus and sulfate salts, and therefore comply with all environmental requirements prescribed for lubricants used for Euro 5 and 6 engines.

LUKOIL GENESIS innovative motor oils are specially designed to help cut fuel consumption and thus, in comparison to the previous generations of motor oils, ensure fuel savings of around 1 litre per one full fuel tank, directly contributing to cutting down hydrocarbons emissions.

The LUKOIL GENESIS motor oils correspond to the level of exploitation properties according to the API SN engine oil category (license API #2523) and are licensed based on the GM Dexos 2 standard: MB Approval 229.51, VW 502 00/505 00, BMW Longlife-04, Renault RN 0710 and comply completely with the ACEA C3-2010 requirements.
